29	3.4 SMART Implementation of IWRM
	4. CONSTRUCTING FEASIBLE IMPLEMENTATION MECHANISMS
31	4.1 Economics and Financing for Innovative Investments
33	4.2 Effective Governance: Enhanced Political Decisions, Stakeholder Participation and Technical Information
36	4.3 Cooperation for Reducing Conflict and Improving Transboundary Water Management
38	4.4 Water Cultures, Justice and Equity
40	4.5 Enhancing Education and Capacity Building
42	HOW PROGRESS IS REPORTED

INTRODUCTION

Implementation Roadmap reports are published twice a year by the World Water Council and Korea Water Forum on behalf of the Government of the Republic of Korea to document progress in addressing challenges identified during the 7th World Water Forum. By displaying information provided by the Daegu-Gyeongbuk Implementation Commitment (DGIC) Champions and which is made available on the Action Monitoring System (AMS) website, the progress reports reflect extensive efforts made by the global water community to move forward on the global water agenda.

The Daegu-Gyeongbuk Implementation Commitment was signed in the presence of champion organizations during the 7th World Water Forum on 17 April 2015 and launched the process of the Implementation Roadmaps.

Based on the 2016 Annual Review meeting's outcomes and DGIC Champions' suggestions, this third edition of the report incorporates new features to better reflect the extent of the work achieved so far.

The AMS and the Implementation Roadmaps are the first attempt at monitoring continuous progress in water related issues across the globe in between World Water Forums. Despite the complex work of collective action, almost all Implementation Roadmaps have significantly progressed since 2015. Such achievements would not have been possible without the dedication of DGIC Champions and the strong involvement of Core Groups members.

Moreover, Implementation Roadmaps are an innovative mechanism to bridge editions of the World Water Forum and they have all been successfully integrated within the 8th World Water Forum Thematic Framework.

This report will serve as a baseline for discussions to be held during the second stakeholder meeting in April 2017 leading up to the 8th World Water Forum in Brasilia, Brazil. The meeting will be an occasion for DGIC Champions to share information and responsibilities and plan activities with stakeholders involved in the Thematic Process, in the lead-up to Brazil in 2018 and beyond.

The second decisive milestone on the path to 2018 will be the second Annual Review meeting, which will be held in October 2017 during Korea International Water Week.

Keep track of the Implementation Roadmaps on the Action Monitoring System website:
ams.worldwaterforum7.org

Themes and goals of the Implementation Roadmaps

The Implementation Roadmaps were designed by Champions and Core Groups members around the 7th World Water Forum Thematic Framework. They embody the water community's determination to move forward on water related issues covering 16 themes. Specific goals were identified for each theme at the outset of the Implementation Roadmaps process and summarized in the [Daegu-Gyeongbuk Implementation Commitment](#) as follows.

1. WATER SECURITY FOR ALL

1.1. Enough Safe Water for All

To enhance water security towards ensuring 'enough' 'safe' water for all users and all uses through the dissemination and sharing of knowledge, appropriate technologies, scientific innovation, best practices and policy tools on: improving water quality by reducing all types of pollution and improving wastewater management; augmenting water supplies through both demand management and the use of non-conventional water resources such as safe wastewater reuse, desalination and rainwater harvesting; and expanding access to water services to those lacking access to safe water

1.2. Integrated Sanitation for All

To advocate for the improvement and development of sanitation and wastewater services and management considering the whole sanitation chain: access, evacuation and treatment (for both non-collective systems and for collective systems), reuse and resources recovery

1.3. Adapting to Change: Managing Risk and Uncertainty for Resilience and Disaster Preparedness

To respond to the dynamic, evolving nature of the water cycle and highlight sustainable approaches to water resources management, disaster management, climate adaptation and economic development

1.4. Infrastructure for Sustainable Water Resource Management and Services

To strengthen and maintain existing water systems and further develop new water storage infrastructure, and to develop adaptable management strategies for ageing of water infrastructures, especially dam facilities, through sharing and exchanging of knowledge and experiences of both developed and developing countries, eventually to provide all stakeholders of ageing dams how and what to do for securing our life and property against threats by nature such as climate change

2. WATER FOR DEVELOPMENT AND PROSPERITY

2.1. Water for Food

To help encouraging private investments in technologies and management practices that enhance the sustainable production of crops, livestock, and fish by both smallholders and larger scale producers, and address the excessive use and degradation of water resources in key production regions that threaten the sustainability of livelihoods dependent on water and agriculture

2.2. Water and Energy

To deliver water and energy for all while minimizing environmental impact, through enhancing efficiency, improving sustainability and strengthening governance in resource management

2.3. Water and Cities

To provide water security for cities by embracing an integrated city planning agenda for a “regenerative city” which enables to better plan for the healthy, livable, risk-resilient city

3. WATER FOR SUSTAINABILITY: HARMONIZING HUMANS AND NATURE

3.1. Green Growth, Water Stewardship and Industry

To ensure coherent policy to enable green growth; foster the long-term engagement of a variety of stakeholders in water management; and recognize economic value of water to avoid business risks and protect ecosystem services

3.2. Managing and Restoring Ecosystems for Water Services and Biodiversity

To slow, stop and reverse the loss of ecosystems, especially wetlands, as a fundamental basis for resilient and successful societies

**3.3.
Ensuring Water
Quality from
Ridge to Reef**

To improve water quality management in situations where water quality degradation or inappropriate use of water qualities is responsible for reducing the quantity of water available for the various uses it is needed for

**3.4.
SMART
Implementation
of IWRM**

To ensure the IWRM approach is applied at all levels throughout the world as a means to achieve water security

4. CONSTRUCTING FEASIBLE IMPLEMENTATION MECHANISMS

**4.1.
Economies
and Financing
for Innovative
Investments**

To ensure that adequate financial provision is made to achieve the global goal of water security

**4.2.
Effective
Governance:
Enhanced Political
Decisions,
Stakeholder
Participation
and Technical
Information**

To guide decision-makers across levels of government to strengthen institutions' capacity in order to reap the economic, social and environmental benefits of good governance; to inform public debate and actions; and to contribute in facilitating change and reform where and when needed

**4.3.
Cooperation
for Reducing
Conflict and
Improving
Transboundary
Water
Management**

To provide guidance to decision-makers across all levels of government in different relevant fields (international law, policy, diplomacy, institutional and technical engineering) on how to develop and improve transboundary management in order to reduce conflicts and ensure an optimal use of water resources for socio-economic development

4.4. Water Cultures, Justice and Equity

To create and maintain an implementation network of the design group members and session participants/ convenors on water, cultural diversity, justice and equity and raise the awareness among water professionals and decision makers about the intricate but yet often ignored relevance of cultural diversity, justice & equity for water management and development and include these aspects into policies, programmes and practice

4.5. Enhancing Education and Capacity Building

To provide guidance to decision-makers across all levels of government on how to develop and improve water education, professional training and capacity building

PROGRESS REPORT

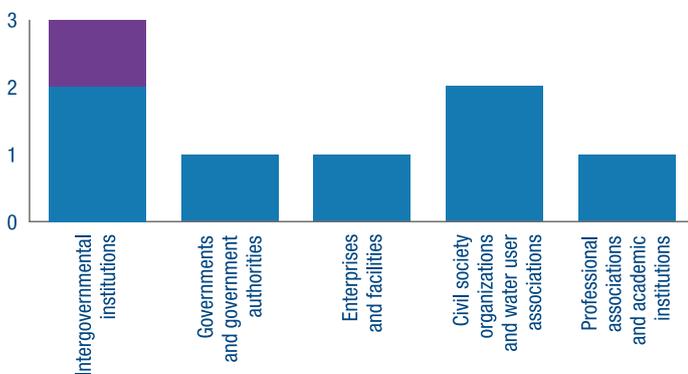

Overall, progress on the Implementation Roadmaps is well under way with a majority of them having made significant headway. Of the 98 objectives currently registered in the Action Monitoring System, more than 74% of them have progressed. This represents a total of 334 actions of which 86% are either ongoing or completed. As Implementation Roadmaps are living documents, they evolve over time. The report may therefore include new objectives, a greater number of targeted actions or new involved stakeholders since October 2016.

1.1 Enough Safe Water for All

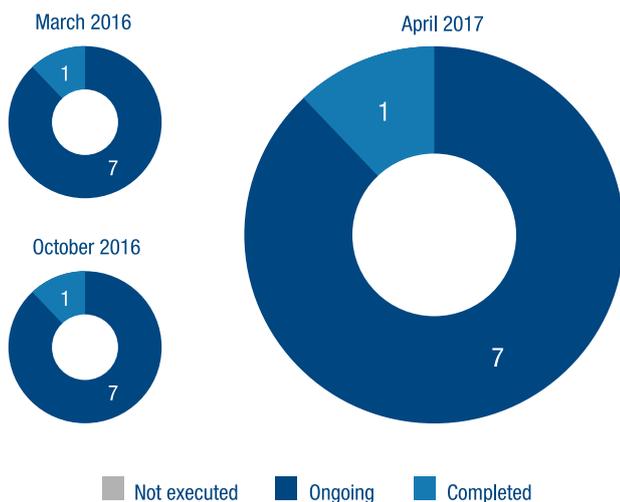

GOAL DESCRIPTION

Water security is essential for sustainable development. The main goal of Theme 1.1 “Enough Safe Water for All” is to contribute to water security and SDG6 on water by facilitating knowledge sharing and providing technical and policy guidance on appropriate technologies, scientific innovation, policy tools and best practices on access to safe water for all uses, improved water quality and wastewater management, and non-conventional water supplies, as well as on water monitoring for SDGs implementation.

THEME LEVEL

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Technical and policy guidance on access to safe water, water quality, nonconventional water supplies

Objective 1.1.a: Facilitate knowledge sharing and promote appropriate technologies, policy tools, participatory institutional frameworks and best practices on access to safe water, improved water quality and wastewater management, and nonconventional water supply methods, including safe water reuse, to enhance water security globally.

Key Focus Area: Water monitoring to support SDGs implementation

Objective 1.1.b: Contribute towards improved water monitoring to support the implementation of SDG6 on water.

Key Focus Area: Capacity building, experience sharing and international cooperation on water security

Objective 1.1.c: Promote capacity building, awareness raising, experience sharing and international cooperation to support the development of national policies for enhanced water security.

CHAMPION

CORE GROUP MEMBERS

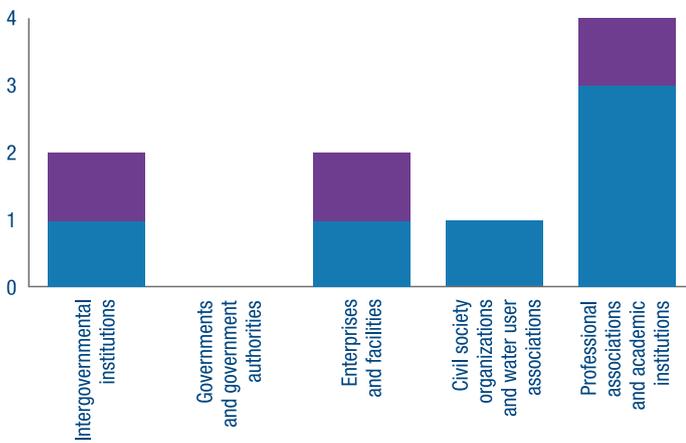

- African Development Bank Group (AfDB)
- American Water Works Association (AWWA)
- Freshwater Action Network Mexico (FANMEX)
- Graduate School of Water Resources, Sungkyunkwan University (SKKU-GSWR)
- Swiss Agency for Development and Cooperation (SDC)

1.2 Integrated Sanitation for All

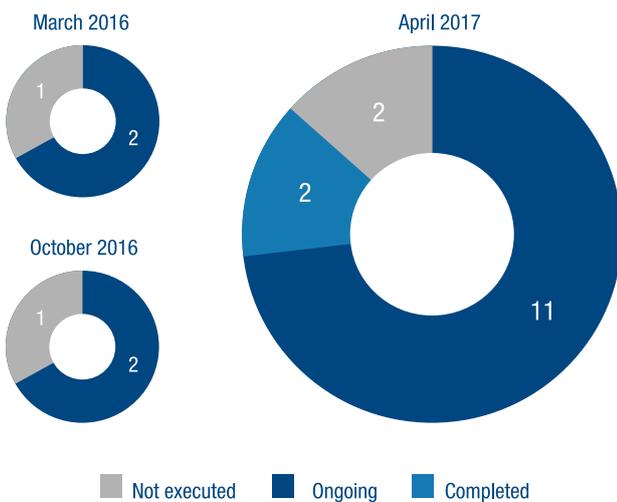

GOAL DESCRIPTION

Access to basic sanitation, and its implementation as a basic human right, is crucial. But to ensure an impact on public health, environment and water resource quality, we must consider the whole sanitation and waste water management chain: access, evacuation and treatment (for both non-collective systems and for collective systems), reuse and resources recovery. The failure to manage water after use is one of today's world's most neglected and serious sustainability challenges that needs urgent attention.

THEME LEVEL

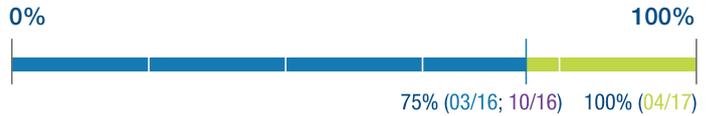

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Universal access to sanitation (containment)

Objective 1.2.a: By 2016, present the overall status and challenges faced in achieving the sanitation MDG and positioning universal access to sanitation to be adopted as a priority issue in the proposed SDGs.

Objective 1.2.b: By 2020, help countries to develop adequate strategies and action plans to ensure equitable sanitation and hygiene for all.¹

Key Focus Area: Fecal sludge management

Objective 1.2.c: By 2025, present and foster implementation of innovative technologies, management approaches and business models that are attractive to city managers, utilities and private sanitation service providers.¹

Key Focus Area: Wastewater management

Objective 1.2.d: By 2020, ensure an appropriate regulatory framework and standard, leading to the progressive development of wastewater transport and treatment and the absence of discharge of contaminated wastewater into water bodies that are sensitive to microbiology.¹

Key Focus Area: Wastewater resource recovery and reuse

Objective 1.2.e: By 2030, development of wastewater reuse (e.g. for irrigation) must be balanced with preservation of water flows needed by neighboring ecosystems.¹

¹ Objectives 1.2.b, 1.2.c, 1.2.d and 1.2.e are new objectives for April 2017

Objective 1.2.f: By 2030, the level of treatment before reuse must be adapted to protect the health of downstream neighbors and users, and irrigated crops consumers, with confidence and acceptance from the public but without excessive technology and energy wasting.²

Objective 1.2.g: By 2030, recycling of organic matter (and/or biogas), nitrogen and phosphorus from sanitation by-products, using hygienic and energy-saving techniques must be generalized.²

Key Focus Area: Integration of sanitation planning and urban development

Objective 1.2.h: By 2020, help policy and decision makers in evaluating options for managing the whole sanitation service chain and choosing the best appropriate sanitation options in the various areas of a city.²

Objective 1.2.i: By 2020, cities and towns should recognize and have a clear vision of their needs, and be engaged in integrated sanitation planning taking into account the importance of universal access, faecal sludge management, wastewater management, and resource recovery and reuse.²

² Objectives 1.2.f, 1.2.g, 1.2.h and 1.2.i are new objectives for April 2017

1.3 Adapting to Change: Managing Risk and Uncertainty for Resilience and Disaster Preparedness

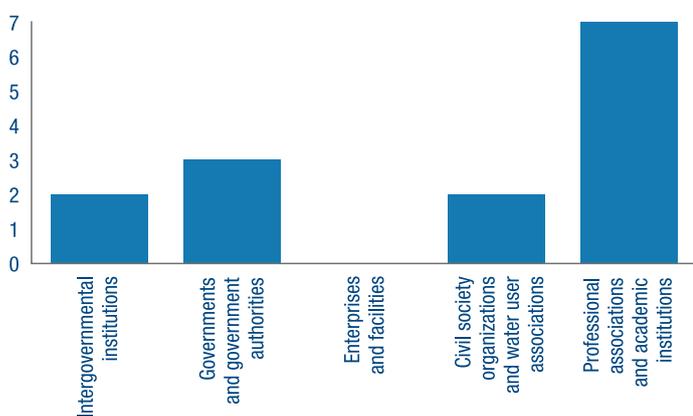

GOAL DESCRIPTION

Following the Sendai Framework targets, Theme 1.3 is intended to respond to the dynamic, evolving nature of the water cycle and highlight sustainable approaches to water resource management, disaster management, climate change adaptation and economic development. Theme 1.3 promotes innovative methodologies and technological applications worldwide, especially in developing countries, and helps further reduce potential damage from natural hazards by sharing state-of-the-art technologies in addressing water-related risk.

OVERALL PROGRESS

ICHARM has been promoting the International Flood Initiative (IFI) mainly by enhancing the Implementation Roadmap of Theme 1.3 over the last six months. IFI assists national platforms in practicing evidence-based disaster risk reduction through mobilizing scientific and research networks at national, regional and international levels. IFI and national platforms with such networks form an important evolutionary link that helps national platforms through the transition between planning and executing the implementation of global development goals like SDGs in collaboration with other countries and organizations.

THEME LEVEL

HIGHLIGHTS

- International Flood Initiative
- ICHARM Newsletter No.42

OBJECTIVE LEVEL

Key Focus Area: Understanding disaster risk

Objective 1.3.a: By the end of 2017, encourage governance bodies at all levels to share the applications of innovative methodologies and technologies in hazard management to quantify flood resilience and mitigate vulnerability.

Objective 1.3.b: By the end of 2017, raise awareness of the importance of climate change adaptation and disaster risk reduction, and support governments in their implementation.

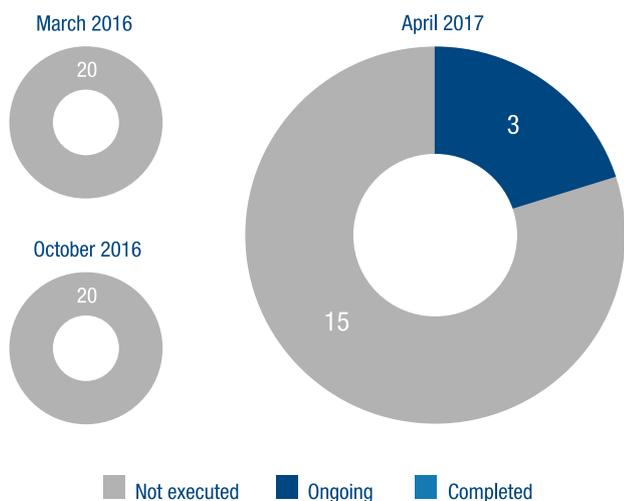

Key Focus Area: Strengthening governance to manage disaster risk

Objective 1.3.c: By the end of 2016, incorporate a long-term climate change adaptation perspective into national/local disaster risk management policies.

ACTION LEVEL

Objective 1.3.d: By the end of 2016, support enhancing the capacity of policy makers to respond to extreme water-related hazards.

Key Focus Area: Investing in disaster risk reduction and resilience

Objective 1.3.e: By the end of 2016, suggest several approaches to managing economies and ecosystems through infrastructure “re-operated” to track emerging changes, and to accommodate a range of potential shifts in the water cycle, with indicators to guide us through effective decision making.

Objective 1.3.f: By the end of 2016, support targeted and cost-effective disaster risk management through the exchange of experience in risk-based approaches.

Key Focus Area: Enhancing disaster preparedness for effective response, and promoting “Build Back Better” in recovery, rehabilitation and reconstruction

Objective 1.3.g: By the end of 2018, strengthen international cooperation between developed and developing countries in applying new science and technologies and improvements to current systems, linking up with local practice and knowledge, focused on “Build Back Better”.

1.4 Infrastructure for Sustainable Water Resource Management and Services

GOAL DESCRIPTION

Throughout the world, appropriate water infrastructure has been shown to reduce hunger and malnutrition, transform rural economies and create employment. Provided that the social and environmental dimensions of water infrastructure are taken into account, water infrastructure plays a vital role in strengthening water security and resilience in the face of climate change and population growth.

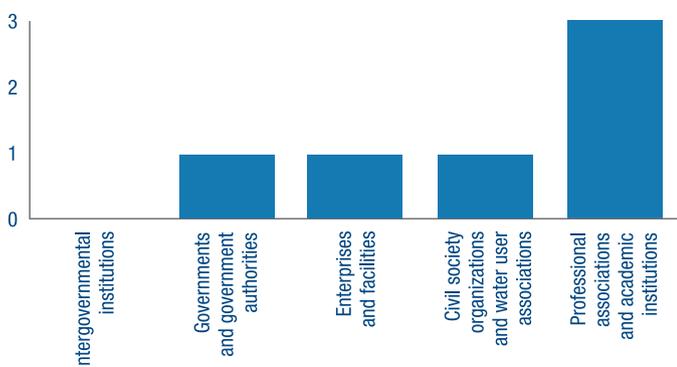

OVERALL PROGRESS

The COP22 in Marrakech, last November, has been a great occasion to advance the cause of water storage infrastructures as crucial tools both for the mitigation of and adaptation to climate change.

HIGHLIGHTS

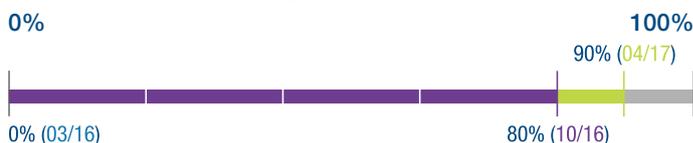

- To help achieve Objective 1.4a, ICOLD and Aqua Media International organized a [continental conference in Africa](#)
- To help achieve Objective 1.4b, during COP22 in Marrakech, an important intervention was made by ICOLD's Secretary-General to show how water storage infrastructures can help societies to adapt to, and to mitigate, climate change
- ICOLD organized with the Moroccan government a [workshop devoted to "dams and climate change"](#). This was a prelude to the Water Day organized during COP22

THEME LEVEL

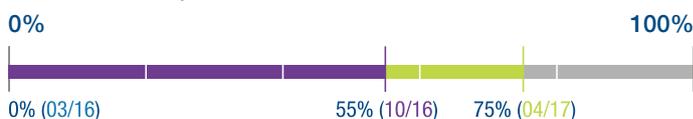

OBJECTIVE LEVEL

Objective 1.4.a: By 2018, establish targets in terms of per capita water storage, as an indicator of well-being and development. Translate those targets into a list of concrete projects, at regional and national levels.

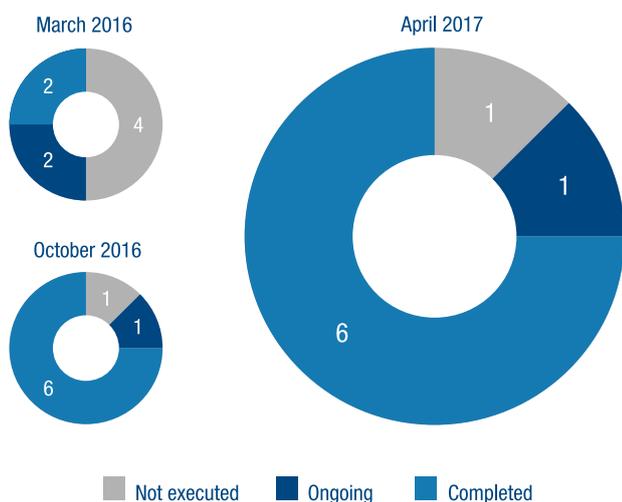

Objective 1.4.b: Convince the political leaders of world's nations of the need for water storage for sustainable human development.

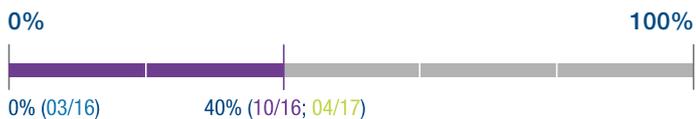

Objective 1.4.c: Establish a special international task force on the Future of Global Waterborne Transportation Infrastructure, Working Group (WG) 181, investigating the needs of waterborne infrastructure and the best practices to meet these.

ACTION LEVEL

Objective 1.4.d: Develop an international program for the implementation of “adaptable” strategies for the management of ageing water infrastructures in which both developed and developing nations participate.

2.1 Water for Food

GOAL DESCRIPTION

Public policies and investments must help encourage private investments in technologies and management practices that enhance the sustainable production of crops, livestock and fish by both smallholders and larger scale producers. Public policy will need to effectively and urgently address the excessive use and degradation of water resources in key production regions that threaten the sustainability of livelihoods dependent on water and agriculture.

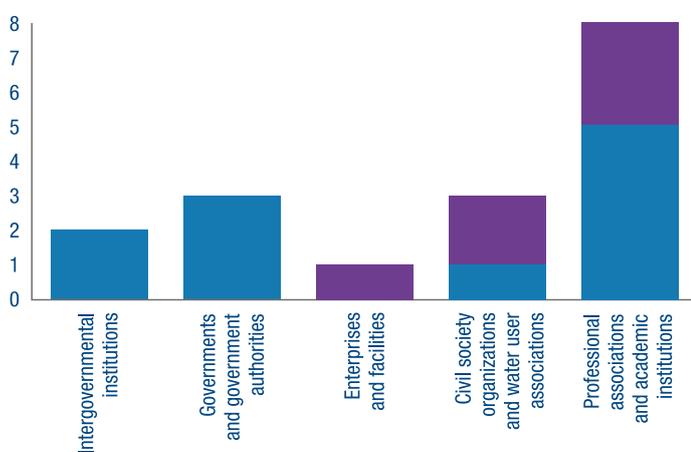

OVERALL PROGRESS

Water for Food are long-term projects to ensure that fundamental change is taking place, so that there will be enough water for food now and for future generations. Some of the key achievements during the past six months are listed below.

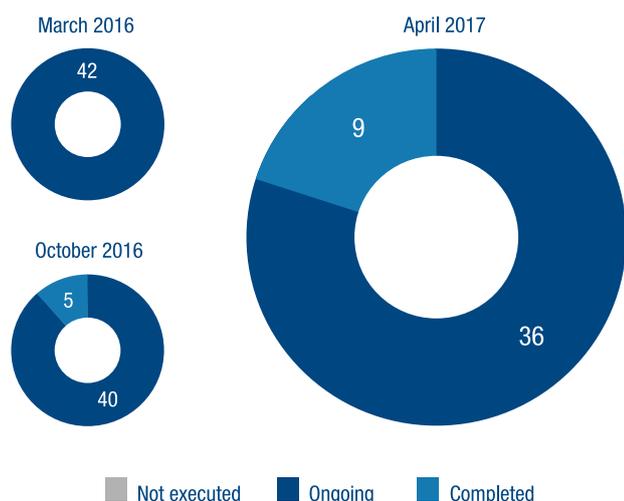

HIGHLIGHTS

- The SDG6 monitoring project (GEMI) partners are advancing in setting up a coherent and unified [monitoring framework for water and sanitation](#) to monitor the SDGs and to contribute to country progress through well-informed decision-making on water, based on harmonized, comprehensive, timely and accurate information
- [Remote sensing approaches](#) using satellite and unmanned aerial vehicles (UAVs) multispectral and thermal infrared imagery have been established by the Consultative Group on International Agricultural Research focused on Water, Land and Ecosystems (CGIAR – WLE) to manage variable rate irrigation of center pivots and drip irrigation systems, optimizing the use of rainfall and minimizing pumping
- A new project with the title “[Integrated Resource Efficiency in Agriculture and Agro-Based Industries](#)” has been developed to be implemented between 2017 and 2019 in Turkey
- A total of 2,727 activities (trainings, seminars, conferences, field tours, demonstration etc.) were organized by the the GAP Regional Development Administration Administration in Turkey from which 6,972 technical staff and 77,298 farmers benefited
- The “Green Growth by Utilizing Water Resources Efficiently and Accurately Project” is being implemented by GAP RDA and Coca-Cola Company in cooperation with Governorship of Diyarbakır Egil Directorate of Provincial Food Agriculture and Livestock in Turkey with technical assistance of UNDP Turkey Office. Within the scope of the project, the construction of a 600 m³ irrigation pool, and channelling of water from the irrigation pool to individual farming land activities were completed in November 2016. Training and education activities on irrigation and effective utilisation of water to farmers and their wives will be completed in May 2017

THEME LEVEL

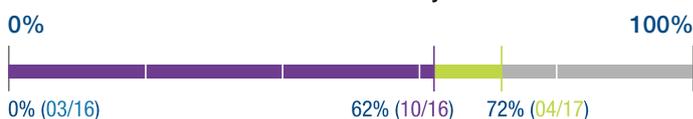

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Best available technology to make efficient use of water in agriculture

Objective 2.1.a: By 2030, substantially increase water-use efficiency and ensure sustainable withdrawals of freshwater to address water scarcity.

Objective 2.1.b: By 2030, substantially increase agricultural water productivity and the incomes of small- and medium-scale food producers.

Key Focus Area: Water quality management for agriculture and environment

Objective 2.1.c: By 2030, improve water quality by reducing pollution and minimizing the release of hazardous agro-chemicals, halving the proportion of untreated wastewater and increasing recycling and safe reuse.

Objective 2.1.d: By 2030, protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes.

Key Focus Area: Modernization of irrigation schemes

Objective 2.1.e: By 2030, implement modernization plans for large-scale irrigation schemes taking into consideration the multiple uses of water.

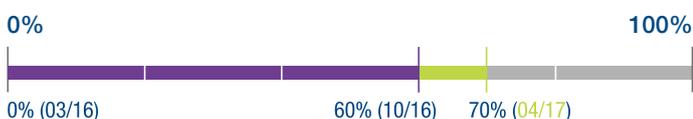

Key Focus Area: Adapt to changing environmental circumstances to increase sustainability

Objective 2.1.f: By 2030, ensure sustainable food production systems and implement resilient agricultural practices that increase productivity and production, help maintain ecosystems, and that strengthen capacity for adaptation to climate change, extreme weather, drought, flooding and other disasters.

Key Focus Area: Increase farmers' capacities in water use for agriculture

Objective 2.1.g: By 2030, expand capacity-building support to developing countries in water-related activities and programs, including irrigation, water harvesting, desalination, water productivity, wastewater treatment, recycling and reuse technologies.

Key Focus Area: Governance and policies to manage transitions in water use for agriculture

Objective 2.1.h: By 2030, reduce hunger and ensure improved access by all people, in particular, the poor and people in vulnerable situations, including infants, to safe, nutritious and sufficient food all year round, by increasing incomes originating from new opportunities in off-farm employment.

2.2 Water and Energy

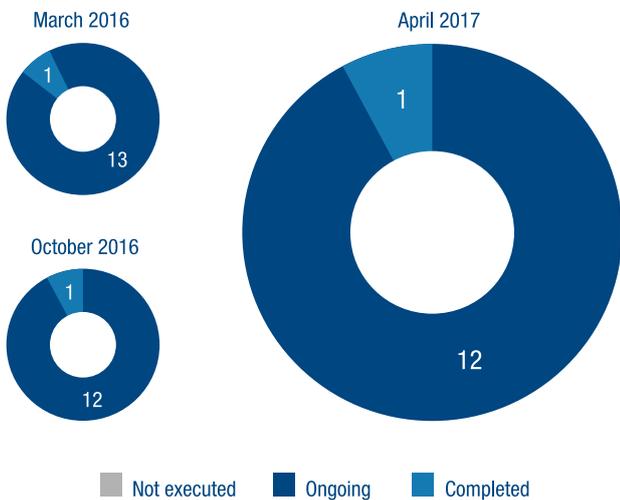

GOAL DESCRIPTION

Ensuring water security while managing the world's rapidly growing demand for energy is a major challenge. Better integration of water and energy policies can help to balance these competing demands, in addition to increased efficiency, better supply and demand management, and harmonization between sectors.

THEME LEVEL

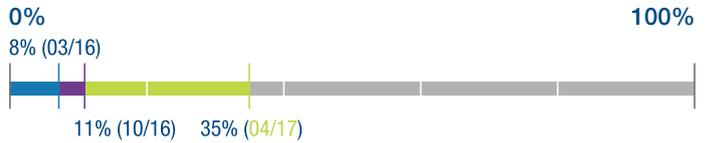

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Energy efficiency in water systems

Objective 2.2.a: Improve efficiency across the whole water cycle, moving away from a sub-systems perspective to a holistic approach.

Key Focus Area: Impact of energy production on water

Objective 2.2.b: Improve water efficiency in the energy sector to enhance water allocation to other uses, such as the manufacturing industry and agriculture and domestic withdrawals, as well as the environment.

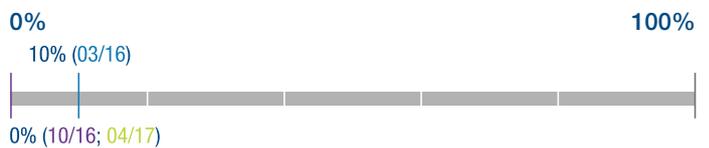

Key Focus Area: Policy and financial incentives for improved water and energy sustainability

Objective 2.2.c: Increase awareness and develop economic and policy incentives which maximize benefits and minimize trade-offs across the water-energy (and food) nexus.

Key Focus Area: Multipurpose energy infrastructure

Objective 2.2.d: Improve the design and operation of multipurpose energy infrastructure to serve beyond electricity generation for one or more other purposes (water quantity and quality management, environmental issues, improved human services and regional development).

Key Focus Area: Decentralized (off-grid) solutions

Objective 2.2.e: By 2030, enable a 50% reduction in the number of people without access to safe water and sanitation, through the provision of affordable energy.

2.3 Water and Cities

GOAL DESCRIPTION

In light of continued urban growth, the goal is to provide water security for cities by embracing an urban agenda that fosters inclusive, healthy, livable, risk-resilient and sustainable cities. This agenda looks beyond water as a service and recognizes how water shapes urban landscapes. It is regenerative, aiming to reduce, reuse, recover, recycle and replenish water, nutrients and energy within the city. Finally, it requires integration between different sectors and scales within the urban landscape and the basin.

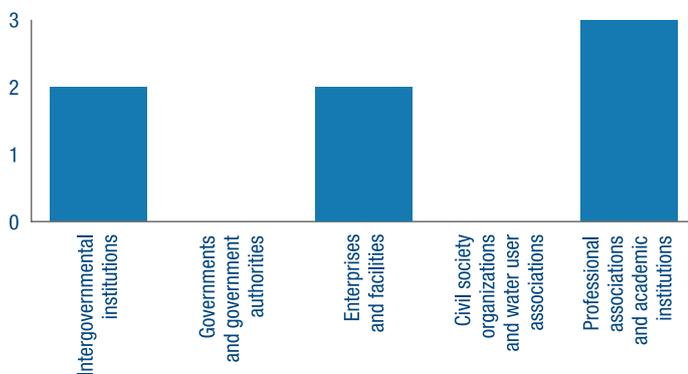

OVERALL PROGRESS

The past six months have been productive in building global commitment to a transformative urban vision: one that can enable sound urban water management. The New Urban Agenda, the UN framework for sustainable urban development adopted in Ecuador in October 2016, includes a strong vision for urban water as part of its overall call for inclusive, safe, sustainable cities.

Also in October, IWA's Principles for Water-Wise Cities were launched, elaborating a set of 17 core practices that cities can embrace for a healthier, safer and more liveable relationship with urban water.

As more and more cities commit to becoming water wise, demand for knowledge on the topic is also rising. In response, a number of international organizations decided to join hands to launch the Urban Waters Hub, which has the ambition of facilitating cities' access to the inspiration, guidance and tools needed to translate this vision into reality.

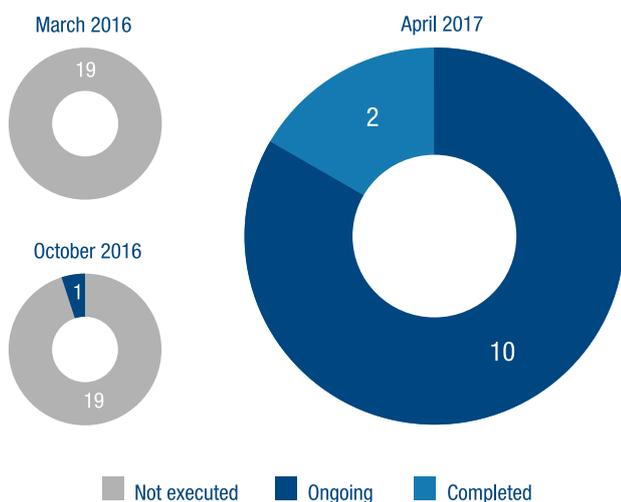

THEME LEVEL

HIGHLIGHTS

- Adoption of the [New Urban Agenda](#)
- Launch of the [Principles for Water-Wise Cities](#) (previously called Urban Water Charters)
- Launch of the [Urban Waters Hub](#)

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Vision and leadership

Objective 2.3.a: Foster a sustainable urban water vision and leadership.

Key Focus Area: Governance for integration of services and scales

Objective 2.3.b: Foster a sound governance to support the implementation of sustainable urban water.

Key Focus Area: Capacity building

Objective 2.3.c: Build the capacity of urban professionals to implement sustainable water solutions.

Key Focus Area: Tools for planning and decision making

Objective 2.3.d: Promote the uptake of knowledge resources that enable cities to plan and make decisions and implement programs that best embrace the Principles for Water-Wise Cities for a healthy, livable and risk-resilient city, maximizing the benefits of cross-sector synergies.³

³ Objective 2.3.d is a new objective for April 2017

3.1 Green Growth, Water Stewardship and Industry

GOAL DESCRIPTION

“Growing first, and cleaning up later” is no longer a viable option for sustainable development. Growing concerns on population projections, rapid urbanization and unpredictable climate change will put water at a greater risk. In such regard, green growth has emerged as a new development strategy to respond to an unsustainable business-as-usual approach. And, it becomes more necessary for major water users to understand their water use and impacts. Theme 3.1 aims to manage water for green growth with different tools and actions, and raise awareness of water users on the importance of socially and economically beneficial water use. It explores effective policies, fosters the long-term engagement of a variety of stakeholders in water management and recognizes the economic value of water.

OVERALL PROGRESS

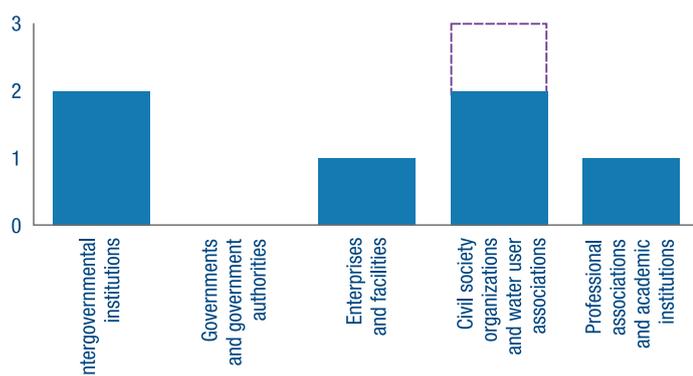

Theme 3.1 has focused on providing policy guidelines for “Water & Green Growth (WGG)” to put emphasis on water as an economic value to secure freshwater for ecosystem services and foster the long-term engagement of stakeholders.

To provide more concrete policy guidelines, after the 7th World Water Forum, a follow-up research project on WGG has been carried out since 2016. To demonstrate the effectiveness of Green Growth, five case studies have been completed as of January 2017. For policy changes towards sustainable development, another joint research project which explains how Smart Water Management, as a technologically innovative tool, has been conducted with the cooperation of the World Water Council and the support of an advisory group.

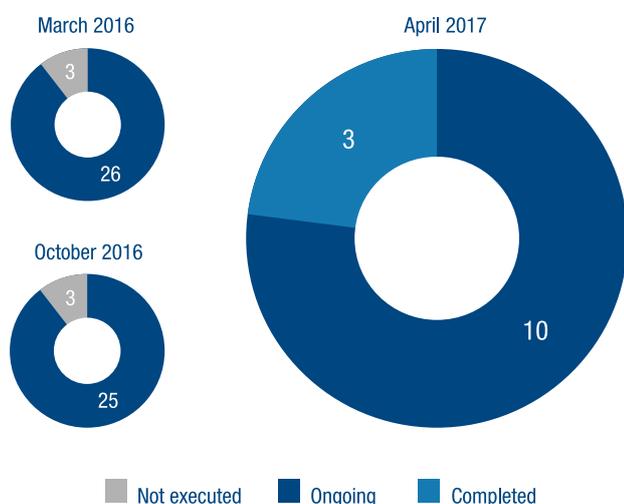

In terms of the involvement of stakeholders, several examples of good governance were found during the WGG research. Efforts to promote WGG as a good strategy for SDGs were presented at various international water events: Korea International Water Week, World Water Congress, etc.

Lastly, for sustainable business development, innovative technologies have been shared between countries. For example, the *Water Academy* was implemented by K-water and Korea Trade-Investment Promotion Agency in Lao PDR. To improve awareness on the role of water, three public campaign cases were also documented.

THEME LEVEL

ACTION LEVEL

■ Not executed ■ Ongoing ■ Completed

OBJECTIVE LEVEL

Key Focus Area: Policy coherence

Objective 3.1.a: By 2018, elaborate the policy guideline, published at the 7th World Water Forum, and provide a policy guideline and roadmap enabling green growth with a time frame.

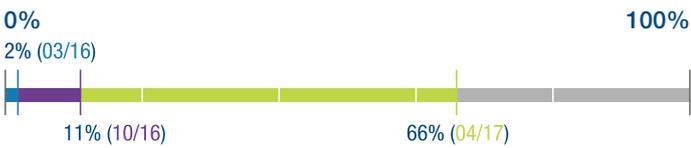

Objective 3.1.b: By 2018, encourage all levels of government to make policy changes for restoring ecosystem services and a circular economy.

Key Focus Area: Involvement of stakeholders

Objective 3.1.c: By 2018, institute an appropriate legal and institutional framework for the participation of all levels of stakeholders in water management.

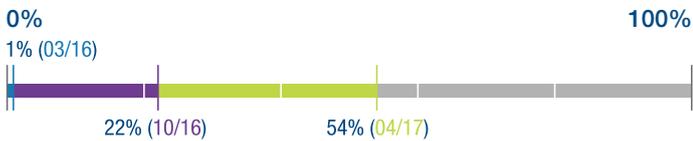

Key Focus Area: Sustainable business models

Objective 3.1.d: By 2018, find sustainable business cases and best practices for a sustainable economy to overcome a silo approach to water management.

Objective 3.1.e: By 2018, increase awareness on the role of water in sustainable business models.

CHAMPION

CORE GROUP MEMBERS

- Alliance for Water Stewardship (AWS)

3.2 Managing and Restoring Ecosystems for Water Services and Biodiversity

GOAL DESCRIPTION

Nature forms a vital component of the water cycle, including critical benefits from water storage, filtration and risk reduction. Degrading ecosystems damage the delivery of water services to people. Hence, there are vital opportunities to improve both the sustainability of water services and the conservation of biodiversity by restoring watersheds, wetlands or rivers, as well as by using nature in engineering designs.

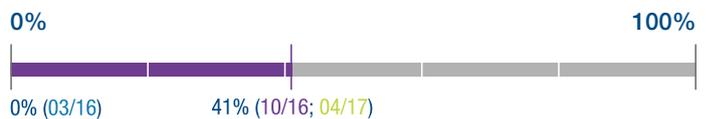

OBJECTIVE LEVEL

Key Focus Area: Address the “drivers of change” affecting wetlands and the availability and abundance of wetlands

Objective 3.2.a: Promote and support integrated water resource planning and management at a river basin level, incorporating an ecosystem services approach.

Objective 3.2.b: As a priority, raise awareness amongst Contracting Parties about the Convention’s mechanisms to address threats to Ramsar sites that are at risk of losing their fundamental ecological character.

Objective 3.2.c: As a priority, increase water-use efficiency in agriculture.

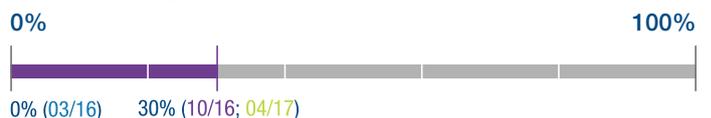

Key Focus Area: Based on experience and clear science, identify important locations around the world in which to take action and opportunities for doing so

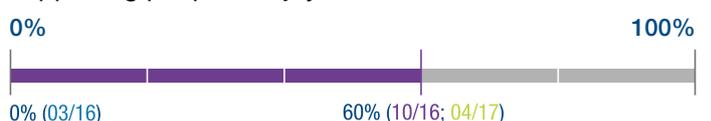

Objective 3.2.d: Use earth observation and citizen science to monitor wetlands and identify locations in which to create benefits for society through management and/or restoration interventions.

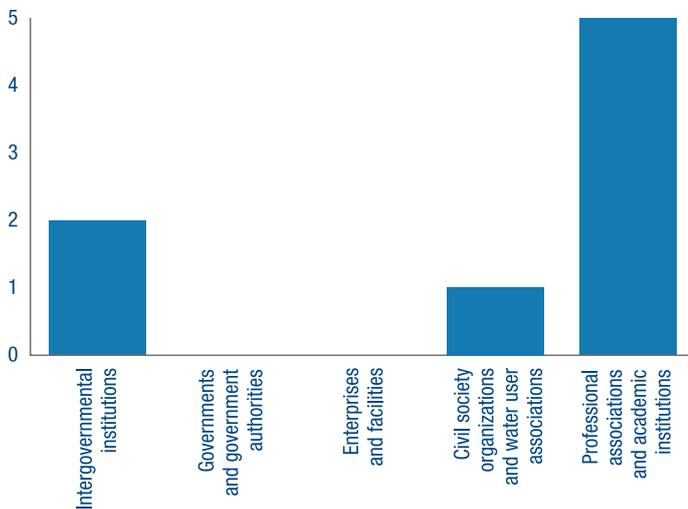

Objective 3.2.e: Increase knowledge of the solutions and technologies emerging from the discipline of “eco-hydrology”.

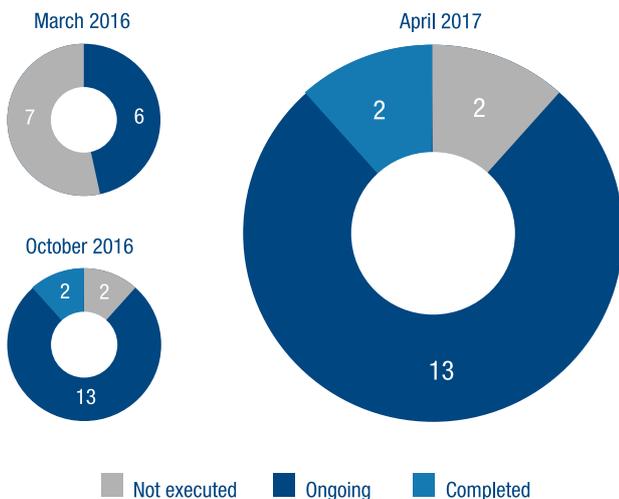

Objective 3.2.f: Develop case studies to increase appreciation of the central role that wetland ecosystems play in supporting civilizations, including by supporting livelihoods, reducing risks from natural disasters and supporting people’s enjoyment of recreation and leisure.

THEME LEVEL

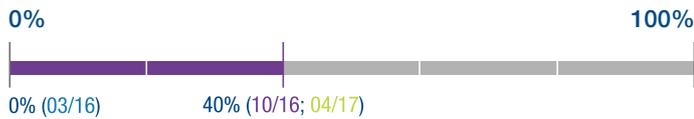

ACTION LEVEL

Key Focus Area: Develop action plans to better manage and restore wetland ecosystems

Objective 3.2.g: Establish national integrated water resources management (IWRM) plans and wetlands policies that adhere to the Ramsar Convention’s “wise use” guidance.

Objective 3.2.h: Support and contribute to efforts at all levels to protect, manage and restore wetlands, with priority given to those that provide significant and/or multiple benefits.

3.3 Ensuring Water Quality from Ridge to Reef

GOAL DESCRIPTION

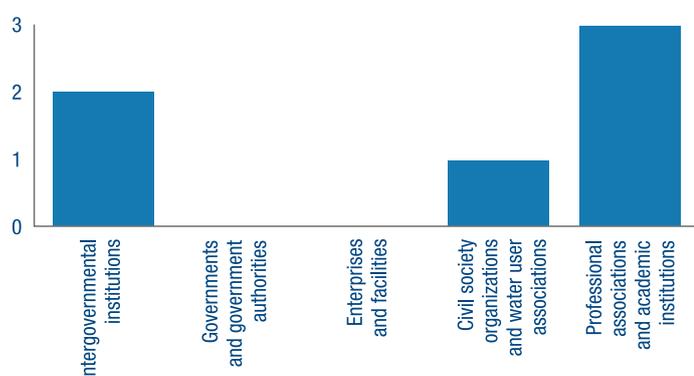

Water quality is a crucial consideration for efficient water resources management. With increasing pressures on available resources, water quality management is increasingly seen as essential for a more balanced and multidimensional approach to the research, policy making, governance, operations and management of water resources. In order to improve water security, water quality management must improve. This is particularly evident in situations where water quality degradation or the inappropriate use of water is responsible for reducing the quantity of water available for the various uses it is needed for.

OVERALL PROGRESS

IWRA and the S2S Platform are collaborating to host a Special Session at the XVI World Water Congress on Water Quality, bringing together a number of international actors working on the governance and management of water quality. This congress, planned for 29 May to 3 June 2017, is a key milestone on the road to the 8th World Water Forum in Brasilia and IWRA is working to continue its champion role at the 8th World Water Forum.

IWRA and KEI attended the 2016 Korea International Water Week and participated in the Roadmap Stakeholder meeting to discuss the evolution of the Implementation Roadmaps as the Thematic Process of the 8th World Water Forum continues.

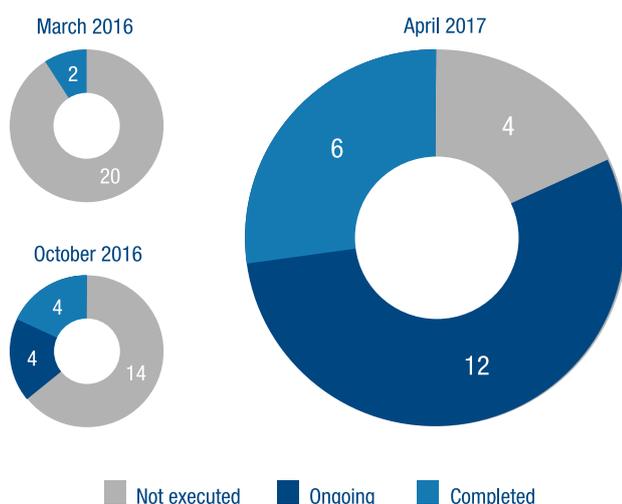

THEME LEVEL

HIGHLIGHTS

- The Compendium on Water Quality has been modified, supplemented and extended by the IWRA team; after editorial committee review, it will be ready for publication
- For the purpose of informing the [XVI World Water Congress](#), the IWRA and the [S2S Platform](#), two core members of Theme 3.3 are preparing a session on water quality in Cancun, alongside other organizations like the Organisation for Economic Co-operation and Development, the International Maritime Organization, the United Nations Educational, Scientific and Cultural Organization and the International Union for the Conservation of Nature

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: Using water smarter to contribute to water security

Objective 3.3.a: Within a context of global changes and limited water resources, contribute to ensuring the availability of water resources in accordance with the different water uses and their associated water quality needs.

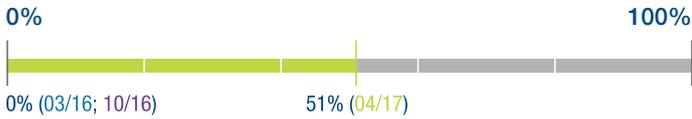

Key Focus Area: Monitoring and reporting of water quality

Objective 3.3.b: Provide enormous opportunities to bring about a data revolution in sustainable development (goals), and support national governments and non-governmental and civil society organizations in improving water quality monitoring and reporting. It is crucial to gather and distribute good quality, credible water-quality data.

Key Focus Area: Strengthening frameworks for governing and managing water quality

Objective 3.3.c: Improve data collection and information exchange on water quality in the different regions of the world and among countries. Use the tools of international organizations to gather policy information on water quality and expand perspectives on water quality. Use existing partnerships and develop new ones to share knowledge and web-based databases to enhance regional cooperation.

Key Focus Area: Sustainable wastewater management and reuse

Objective 3.3.d: Promote wastewater as a resource of water and nutrients. Showcase that it is possible to manage wastewater in an environmentally and economically feasible way by identifying and promoting best practices, policies and financial mechanisms. Furthermore, help to put the Sustainable Development Goals (SDG 6.3) into practice.

Key Focus Area: Managing sources for coastal and marine water quality improvements

Objective 3.3.e: Contribute to the enhanced sustainability of investments in the land–river–coast–sea continuum, including water quality management initiatives. Increase collaboration, knowledge sharing, innovation and action to address the links between land, water and coastal areas.

3.4 SMART Implementation of IWRM

GOAL DESCRIPTION

When we consider the multiple uses of water, be it for food and energy, industry and environment, or inland navigation and recreation, an integrated management approach is necessary to balance supply and demand. But how is achieving that balance implemented in practice, while safeguarding the sustainability of surface and groundwater sources?

OVERALL PROGRESS

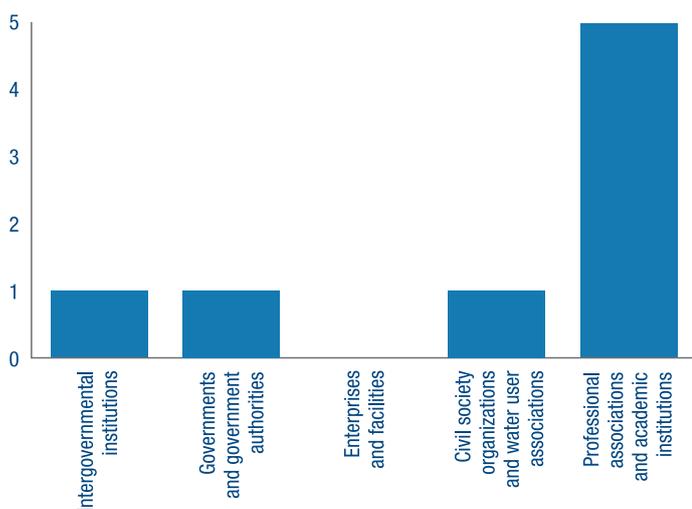

During the last six months, a number of activities related to the Implementation Roadmap for the SMART Implementation of IWRM have been implemented. The Champion organizations as well as Core Group members of the Implementation Roadmap for Theme 3.4 have initiated efforts in both an *ad hoc* and programmatic manner.

Efforts were intensified in the publication component and the organization of various fora – whereas the exchange of case studies is ongoing.

In addition to what was achieved before, the Core Group as part of the World Water Council IWRM Task Force, has supported a series of activities that will place IWRM at the center of high-level discussions around sustainable water management and promote its integrated approach. This is key for the successful implementation of SDG 6 and not only this goal's targets, but also those related to water throughout the SDGs.

The Implementation Roadmap 3.4 Champions and Core Group members will continue to work promoting IWRM to facilitate its implementation and help achieve sustainable water resources management.

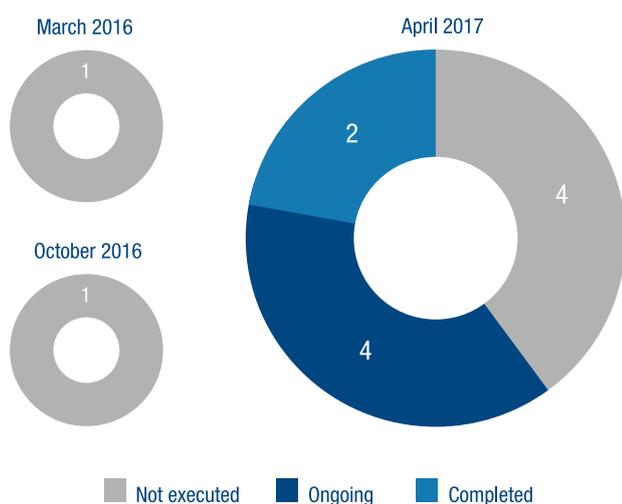

THEME LEVEL

HIGHLIGHTS

- GWP publication “Linking Ecosystem Services and Water Security”
- UNESCO series on IWRM
- New and updated tailored key political messages that will trigger the rethinking of IWRM to galvanize the required political support for action on SDG6, particularly SDG 6.5, as well as other water-related targets
- Support for UN-wide efforts in implementing SDG 6.5.2

ACTION LEVEL

OBJECTIVE LEVEL

Key Focus Area: IWRM for sustainable water resources management

Objective 3.4.a: By 2018, promote/support initiatives designed to incorporate relevant policies and scientific issues through cross-cutting approaches on water management for the implementation of IWRM.⁴

⁴ Objective 3.4.a is a new objective for April 2017

Objective 3.4.b: By 2018, support knowledge generation on IWRM aspects at all levels.⁵

Objective 3.4.c: By 2018, promote/support knowledge transfer via the training of human resources.⁵

- Department of Water Affairs and Forestry (DWAF), South Africa
- Korea Water Resources Association (KWRA)
- Network of Asian River Basin Organizations (NARBO)

⁵ Objectives 3.4.b and 3.4.c are new objectives for April 2017

4.1 Economics and Financing for Innovative Investments

GOAL DESCRIPTION

Investment needs for improvements in water, for both hard and soft measures, are increasingly daunting, while official development assistance (ODA) remains stagnant. But the heart of the issue is not simply about figures and amounts, but about improving flows and ensuring financial feasibility and viability for improvements. From this perspective, how will the Sustainable Development Goals be financed? What role can the private sector play?

OBJECTIVE LEVEL

Key Focus Area: To ensure that adequate financial provision is made to achieve the global goal of water security

Objective 4.1.a: Capture the benefits of ecosystems for water resources and services in economic and financial terms in order to generate finance for their preservation and enhancement. Specifically, to increase the numbers and range of payments for environmental services (PES) and green infrastructure (GI) projects in all regions, to develop an agreed methodology and criteria for PES and GI projects and to involve private and other non-governmental partners in these schemes.

Objective 4.1.b: Using performance-based contracts (PBCs) and other forms of results-based contracting to create incentives for contractors to achieve cost efficiencies, timely deliveries or enhanced benefits of other kinds. Specifically, to increase the numbers and range of PBCs in operation and to build a casebook of the implementation of value to potential public clients, contractors and regulators.

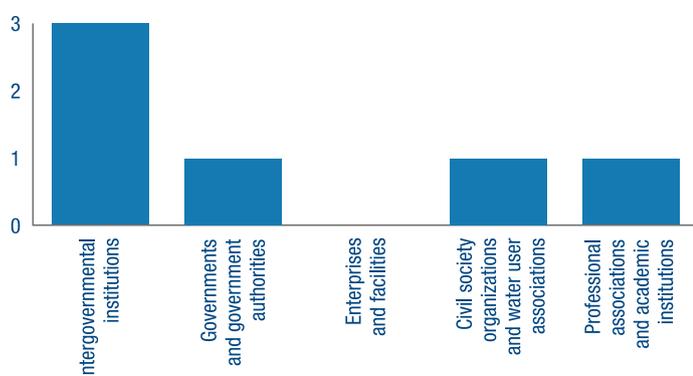

Objective 4.1.c: Promote new financing and implementation mechanisms to extend access to water and sanitation services both in rural areas and in poorer districts of cities. Specifically, to examine the financial provision for small-scale water and sanitation service providers, the potential of microfinance and the use of other pro-poor techniques, such as prizes and solidarity systems.

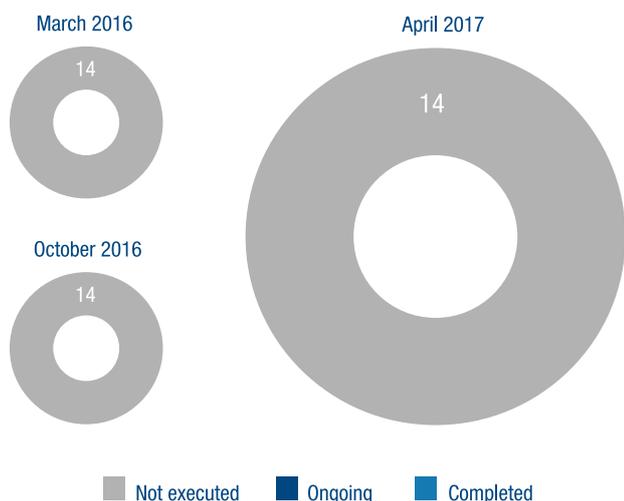

Objective 4.1.d: Present recent work on tracking financial flows into the water and sanitation sector and showcase innovative financial approaches. Specifically, finance models based on the enhanced value of land due for development and that facilitate access to local lending sources and the greater use of bankable business models adapted for the private sector.

THEME LEVEL

ACTION LEVEL

Objective 4.1.e: Present a crucial assessment of traditional means of financing agricultural water use. Present and assess experiences of the use of public–private partnerships (PPPs) in irrigation management, and consider other options for agricultural water finance. Specifically, use this evidence to assess the scope for PPPs in the finance of irrigation and, related to this, the scope for using water pricing as a management tool in this sector.

Objective 4.1.f: Present different methods and sources of finance for water resources management, with case studies from specific countries, and consider the scope for making such practices more widespread.

4.2 Effective Governance: Enhanced Political Decisions, Stakeholder Participation and Technical Information

GOAL DESCRIPTION

The international community now recognizes that the world's "water crisis" is largely a "governance crisis". Many solutions to water problems are well-known and exist. What is often at stake is their implementation. This is why Theme 4.2 aims to guide decision makers across levels of government to strengthen institutions' capacities in order to reap the economic, social and environmental benefits of good governance, to inform public debate and actions, and to contribute to facilitating change and reform where and when needed.

OVERALL PROGRESS

Since the close of the 7th World Water Forum, the OECD Water Governance Initiative (WGI) has been championing the Implementation Roadmap 4.2 on Effective Governance, which 12 objectives echo the OECD Principles on Water Governance adopted in June 2015. Over 2015–2016, activities of the WGI have put a high premium on the implementation of the 12 objectives of Implementation Roadmap 4.2 across countries, basins and cities by:

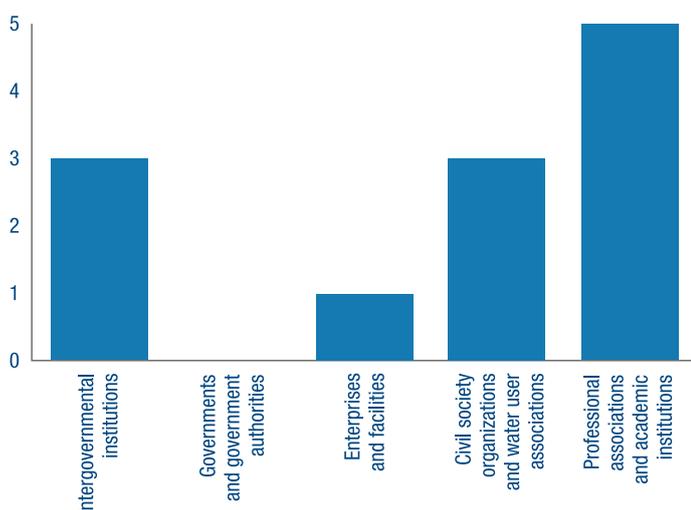

- Raising the profile of water governance in the global agenda (contribution to COP21 and 22, Habitat III, SDGs monitoring process, etc.);
- Providing a platform to share experiences on water governance topics (organization of 50+ events, workshops and sessions on water governance over 2015–2016);
- Producing new knowledge (publication of 30+ reports, publications and articles on various water governance topics); and
- Collecting and showcasing solutions (compilation of 200+ case studies, success stories, practices).

On the road to the 8th World Water Forum in Brasilia, the WGI is fully dedicated to deliver a framework of water governance indicators and a database of water governance practices that should further help realizing the goal of Implementation Roadmap 4.2: guiding decision makers across levels of government to design and implement better policies that reap the economic, social and environmental benefits of good water governance.

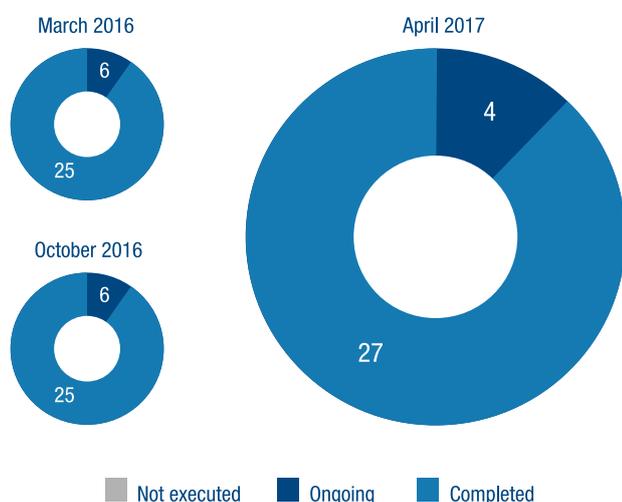

HIGHLIGHTS

- 180+ governments and major stakeholders have endorsed the OECD Principles on Water Governance and joined the [Global Coalition for Good Water Governance](#)
- The 12 objectives of Implementation Roadmap 4.2 have been translated into 16 languages and widely disseminated around the world, at country, basin and city level
- The 12 objectives of the Implementation Roadmap 4.2 have received strong political support worldwide, with explicit mentions in the [OECD Council Recommendation on Water](#) and the [Action Plan of the High-level Panel on Water](#), amongst others
- The 12 objectives of Implementation Roadmap 4.2 have been referenced on a regular basis in water literature ("Stakeholder Engagement for Inclusive Water Governance: "Practicing What We Preach" with the OECD Water Governance Initiative"), projects and advocacy activities ("The 12 OECD principles on water governance – When science meets policy").

THEME LEVEL

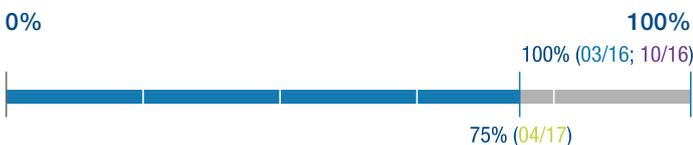

ACTION LEVEL

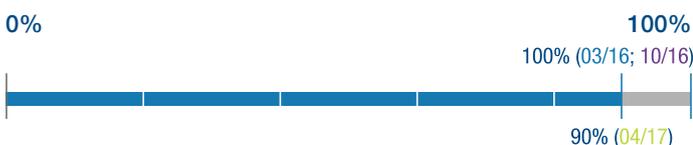

OBJECTIVE LEVEL

Key Focus Area: Effectiveness of water governance

Objective 4.2.a: By 2030, clearly allocate and distinguish roles and responsibilities for water policy making, policy implementation, operational management and regulation, and foster coordination across these responsible authorities.⁶

Objective 4.2.b: By 2030, manage water at the appropriate scale(s) within integrated basin governance systems to reflect local conditions and foster coordination between the different scales.⁶

Objective 4.2.c: By 2030, encourage policy coherence through effective cross-sectoral coordination, especially between policies for water and the environment, health, energy, agriculture, industry, spatial planning and land use.⁶

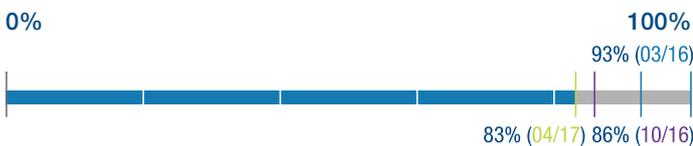

Objective 4.2.d: By 2030, adapt the level of capacity of responsible authorities to the complexity of the water challenges to be met and to the set of competencies required to carry out their duties.

Key Focus Area: Efficiency of water governance

Objective 4.2.e: By 2030, produce, update and share timely, consistent, comparable and policy-relevant water and water-related data and information, and use it to guide, assess and improve water policy.⁶

Objective 4.2.f: By 2030, ensure that governance arrangements help mobilize water finance and allocate financial resources in an efficient, transparent and timely manner.

Objective 4.2.g: By 2030, ensure that sound water management regulatory frameworks are effectively implemented and enforced in pursuit of the public interest.

Objective 4.2.h: By 2030, promote the adoption and implementation of innovative water governance practices across responsible authorities, levels of government and relevant stakeholders.

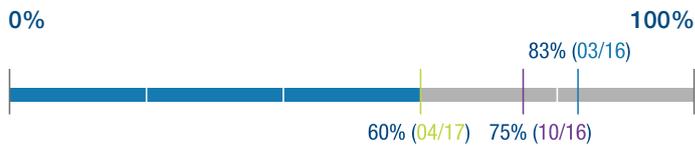

Key Focus Area: Trust and engagement in water governance

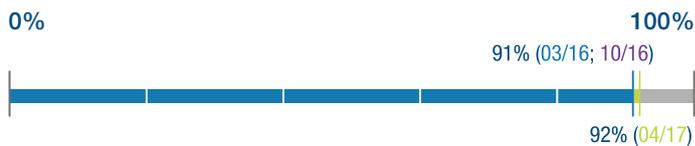

Objective 4.2.i: By 2030, mainstream integrity and transparency practices across water policies, water institutions and water governance frameworks for greater accountability and trust in decision making.⁶

Objective 4.2.j: By 2030, promote stakeholder engagement for informed and outcome-oriented contributions to water policy design and implementation.⁶

Objective 4.2.k: By 2030, encourage water governance frameworks that help manage trade-offs across water users, rural and urban areas, and generations.

Objective 4.2.l: By 2030, promote regular monitoring and evaluation of water policy and governance where appropriate, share the results with the public and make adjustments when needed.⁶

⁶ The percentages for objectives 4.2.a., 4.2.b., 4.2.c., 4.2.e., 4.2.i, 4.2.j, and 4.2.l. have decreased since the last edition of the Progress Report. This is explained by the fact that new indicators of progress were added to assess the progress of these objectives since October 2016

4.3 Cooperation for Reducing Conflict and Improving Transboundary Water Management

GOAL DESCRIPTION

Just under half of the world's population lives in transboundary river basin areas. Indeed, water is a potential catalyst for cooperation and peace from local to international levels. The conditions for sound and sustainable cooperation must be worked towards actively through legal arrangements, joint management practices and institutions and capacity building, Inter-governmental agreements at the global level, such as the UN Watercourses Convention and the UNECE Water Convention, may have an increasing role to play in facilitating more effective water cooperation in the future.

OVERALL PROGRESS

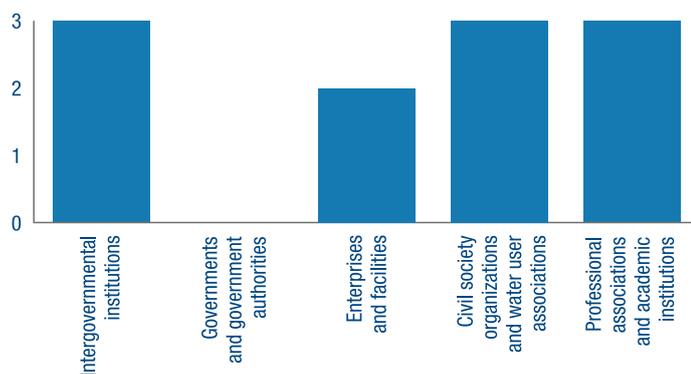

Significant progress was made in moving transboundary cooperation forward. In 2016, INBO promoted experience sharing both globally (World General Assembly in Mérida, Mexico, June 2016) and regionally (Europe-INBO General Assembly, Lourdes, France, October 2016). The global network of transboundary basins working on climate change, jointly managed by UNECE and INBO, placed transboundary cooperation in a changing climate higher in the international agenda. The issue was addressed at COP22 (November 2016, Marrakech), with projects implemented in many transboundary basins (Mekong, Congo, Chira-Catamayo) under the framework of the Paris Pact (an INBO initiative gathering 350 organizations from 94 countries).

UNECE's efforts as Secretariat of the 1992 Water Convention led to the opening of the legal instrument from a regional to a global one in March 2016. The organization has since then focused on promoting the benefits of transboundary cooperation derived from its implementation (workshops: Tunisia, September 2016; Mexico, October 2016; IGAD, December 2016).

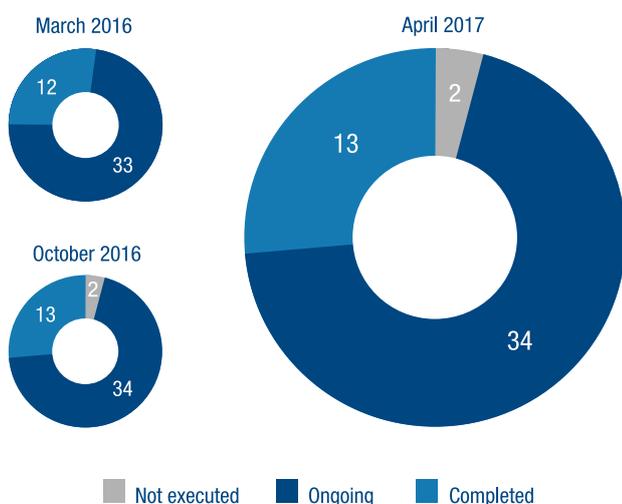

UNESCO-IHP also launched its Water Information Network System (WINS), a key water information system (fed by local, basin, regional and national water information systems) which will provide data for the water SDG, including indicator 6.5.2 on transboundary water cooperation, which will help to monitor progress made (January 2017).

In 2016, GEF has invested more than USD 40 million in transboundary freshwater management, supporting 14 countries across North and East Africa, South America and Central Europe towards catalyzing foundational capacity building along with investments to balance conflicting uses in transboundary surface and groundwater.

THEME LEVEL

ACTION LEVEL

HIGHLIGHTS

- International law: [Global opening of the 1992 Water Convention](#): as of 1 March 2016, all United Nations Member States can accede to the Convention
- Publication: [“Reconciling Resource Uses in Transboundary Basins”](#) (UNECE)
- Launch of the IHP Water Information Network System – WINS (January 2017)
- INBO regional and global general assemblies (INBO World General Assembly, 1–4 June 2016, Mérida, Mexico; Europe-INBO, 19–22 October 2016, Lourdes, France)
- GEF IW:LEARN Launch of the revamped [IW:LEARN website](#) on 3 March 2017
- UNECE/INBO publication now available in English, French and Russian: [“Water and Climate Change Adaptation in Transboundary Basins: Lessons Learned and Good Practices”](#)

- FAO publications on groundwater governance: “Shared Global Vision for Groundwater Governance 2030 and a Call-for-Action”, “Global Framework for Action to Achieve the Vision on Groundwater Governance” and “Global Diagnostic on Groundwater Governance”

OBJECTIVE LEVEL

Key Focus Area: Developing transboundary basin organizations

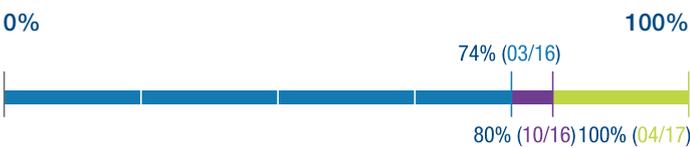

Objective 4.3.a: By 2030, establish and support programs of “peer-to-peer” twinning between basin organizations and related institutions (water centers and national and local administrations), to foster direct exchanges of knowledge, experts, techniques and methodologies.

Objective 4.3.b: By 2030, establish and support capacity-building programs for transboundary basin organizations focused on institution strengthening, funding mechanisms, policies for stakeholder involvement, water monitoring networks and databases.

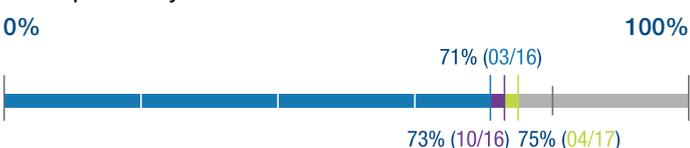

Objective 4.3.c: By 2030, develop existing networks of exchanges of knowledge and expertise between basin organizations.

Objective 4.3.d: By 2030, among basin organizations, disseminate and refine the existing indicators assessing the performance of the different services involved in transboundary water management (joint monitoring, early warning systems, planning and programming, etc.).

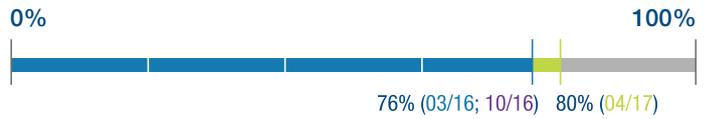

Objective 4.3.e: By 2030, support in transboundary basins and groundwater the development of water documentation and information systems and the interoperability of data and databases.

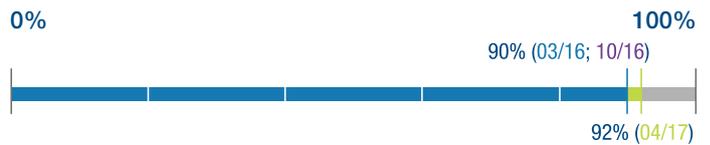

Key Focus Area: Strengthen international law and diplomacy related to transboundary water management

Objective 4.3.f: By 2030, foster the accession of additional states to the UNECE Convention on the

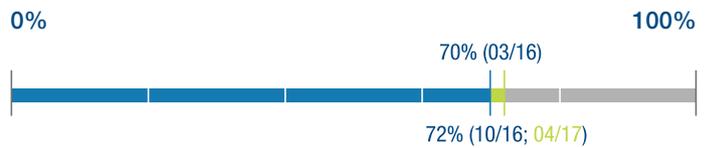

Protection and Use of Transboundary Watercourses and International Lakes (UNECE Water Convention) and the UN Convention on the Law of the Non-navigational Uses of International Watercourses (UN Watercourses Convention), as well as promote their implementation on the ground and their further development in a coherent manner.

Objective 4.3.g: By 2030, foster the establishment of new basin agreements in transboundary basins and for groundwater, the implementation of existing agreements and, where necessary, their revision to address emerging challenges.

Objective 4.3.h: By 2030, support intersectoral cooperation and the sharing of the benefits of transboundary water cooperation across sectors and borders.

4.4 Water Cultures, Justice and Equity

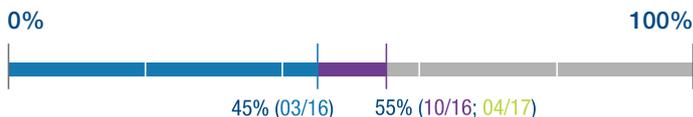

GOAL DESCRIPTION

Create and maintain an implementation network of the design group members and session participants/conveners on water-related cultural diversity, justice and equity. Raise awareness among water professionals and decision makers about the intricate, yet often ignored, relevance of cultural diversity, justice and equity for water management and development and include these aspects into legislation, policies, programs and practice.

OBJECTIVE LEVEL

Key Focus Area: Water cultural diversity, justice and equity

Objective 4.4.a: Inspire water policy makers to raise attention to water and heritage in dialogues about the SDGs and assessment instruments, including Environmental Impact Assessments.

Objective 4.4.b: Confirm commitments, including at the highest level, to involve indigenous peoples' perspectives for better water governance.

Objective 4.4.c: Foster leadership and the involvement of women at all levels of management and implementation of water policies and programs.

Objective 4.4.d: Foster a recognition and understanding of the diverse perspectives on water, water rights, legal frameworks and how they can be better understood and embedded in cooperative mechanisms, from public participation to international conventions.

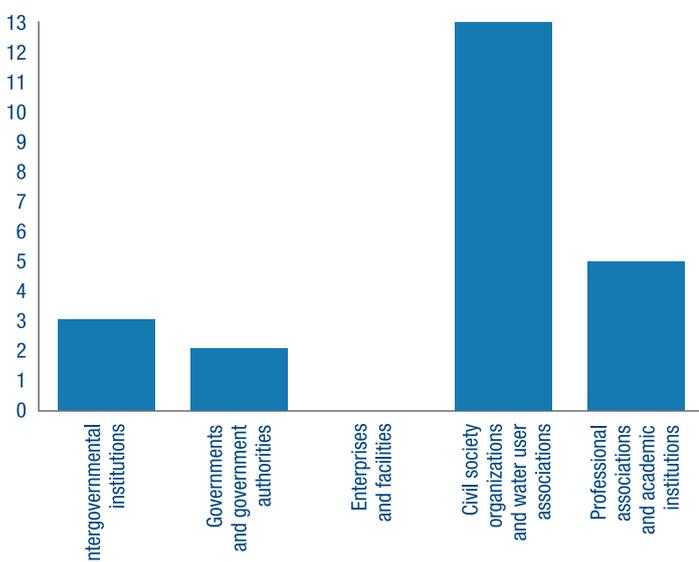

Objective 4.4.e: Present the concept of water ethics as a practical tool for setting higher standards for the water sector, and to collect ideas and suggestions from participants about the content and strategy of the Water Ethics Charter.

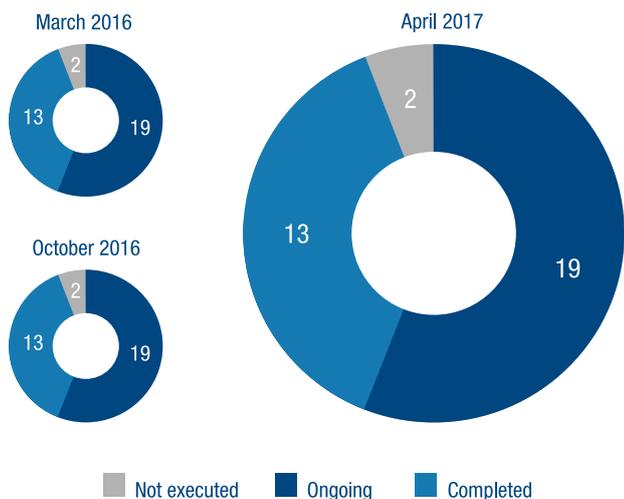

Objective 4.4.f: Consider the complex cultural, religious, economic and environmental functions of water to demonstrate how these can contribute to improving water management, water security and sustainable development.

4.5 Enhancing Education and Capacity Building

GOAL DESCRIPTION

Technical solutions provide only part of the answer to implementation. If the capacity to run or maintain these solutions is absent, then the solution is condemned to fail. This is why water education and training is vital to the success of any project. In particular, cross-learning across basins and watersheds can offer valuable learning exchanges.

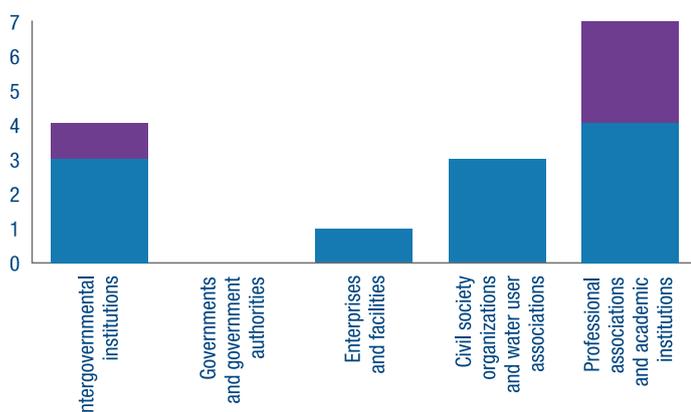

OVERALL PROGRESS

Among the actions undertaken, KWF held several events in October 2016, around the Korea Water Week. The Water Culture Creation Forum and a photo exhibition were held at the Andong WWF7 Commemoration Center and gathered 200 and 1000 participants respectively to discuss water culture related to dams and lakes utilization.

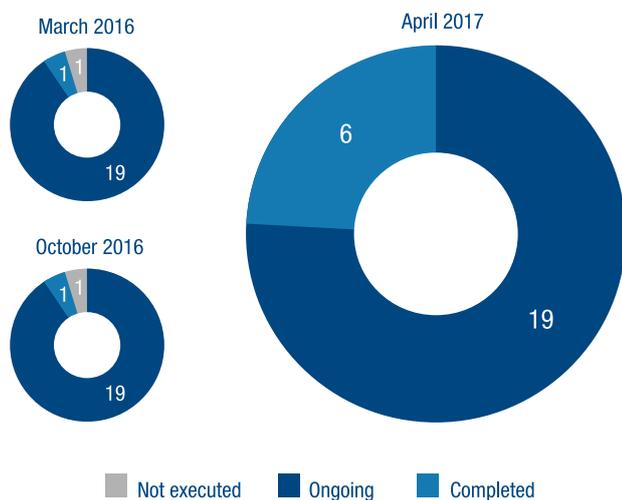

The International Network of Water Training Centers, its Secretariat (IOWater) and partners of the design group also implemented capacity building activities to the benefit of water professionals worldwide. Water training centers were created and strengthened. Québec'Eau was inaugurated in Canada and Hydrus-Brazil was launched with the perspective of development in two sites: Brasília for the training of managers of IWRM at basin level and regulators of water and sanitation services (WSS), and Sao Paulo for the training of technicians of WSS.

Training programs (including "training of trainers", e.g. Stung Sen, Cambodia) were carried out on IWRM (in Brazil; Cuba; the basins of Hai, China; and in Pawn-Pilu, Myanmar), WSS (ONEA, Burkina Faso; Rand Water, South Africa; Palestinian Water Authority) and trending priority topics, including water information systems (Nam Ngum Basin, Laos), innovative energy production techniques in water production/wastewater treatment plants (IOWater for Suez and Agbar) and financial mechanisms for climate change adaptation (EcoCuencas).

THEME LEVEL

ACTION LEVEL

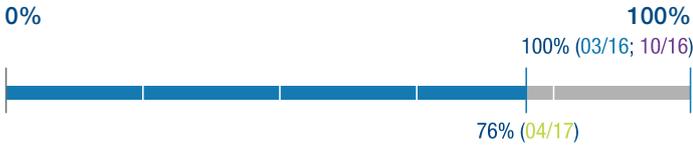

HIGHLIGHTS

- Launch of the [Québec'Eau Training Center](#)
- Organization by KWF of a "training of trainers" workshop on IWRM, targeting Asia-Pacific region public officials, with the participation of seven countries (Laos, Nepal, Thailand, Mongolia, Indonesia, Myanmar, Cambodia), Oct 2016, Daegu, Republic of Korea
- Launch of the [Hydrus-Brazil Training Center](#)
- Organization of training sessions on financial mechanisms for adaptation to climate change ([EcoCuencas](#), Brazil, Colombia, Ecuador, Peru)
- Organization of an innovative training program in France, by IOWater for Suez and AGBAR, on water treatment and climate change mitigation (techniques for energy production in water production plants and wastewater treatment plants)
- Training program on maintenance and energy production of water production plants and wastewater treatment plants, Rand Water, South Africa

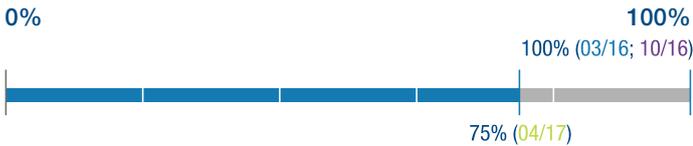

OBJECTIVE LEVEL

Key Focus Area: Develop education for and raise awareness of water issues

Objective 4.5.a: By 2018, assess global water education needs that will have to be satisfied in order to achieve the SDGs.⁷

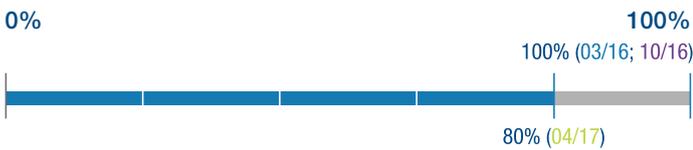

Objective 4.5.b: By 2020, develop a toolkit of innovative techniques for communication on water issues.⁷

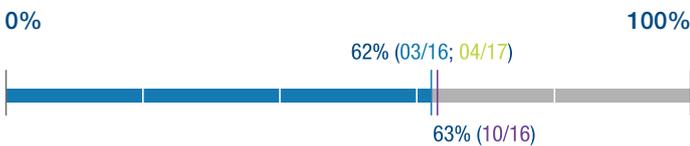

Key Focus Area: Train water professionals

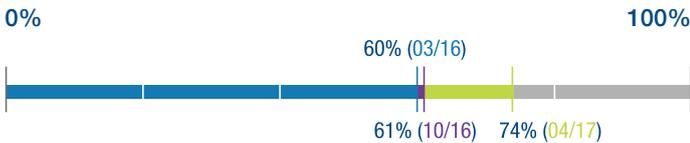

Objective 4.5.c: By 2030, promote adequate financing for the training of water supply and sanitation professionals.⁷

Objective 4.5.d: By 2030, develop training programs for water supply and sanitation services' managers, engineers, technicians and manual workers.⁷

Objective 4.5.e: By 2030, develop training programs for the staff of basin organizations and stakeholders involved in water resources management.

⁷ The percentages for objectives 4.5.a, 4.5.b, 4.5.c and 4.5.d have decreased since the last edition of the Progress Report. This is explained by the fact that additional actions have been launched and new indicators have been added to assess their progress since October 2016

How progress is reported

Progress is made on specific objectives through targeted actions. This report assesses progress with data extracted from the Action Monitoring System (AMS) together with qualitative information provided by the DGIC Champions themselves. Progress is measured at three levels: the **theme level**, the **action level** and the **objective level**.

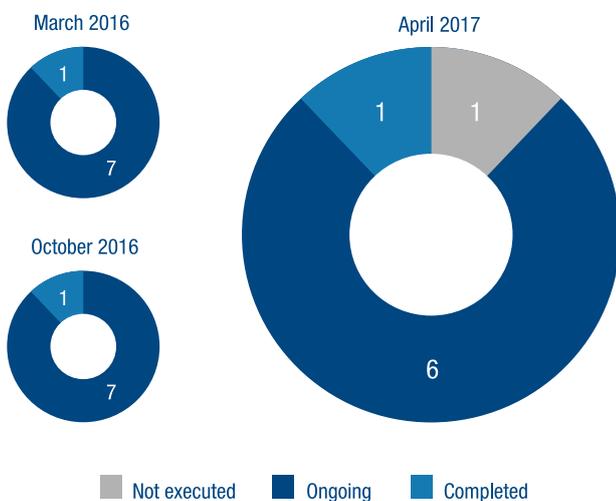

THEME LEVEL

At the theme level, bar charts compare the number of stakeholder organizations in five groups engaged in the theme. Blue indicates the number of organizations involved in March 2016. Increases in the number of organizations between March and October 2016, as well as between October 2016 and April 2017, are respectively indicated in purple and green. Any decrease in the number of organizations is shown with a dotted line.

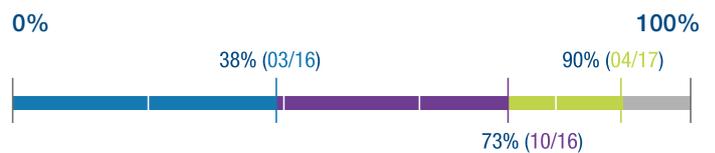

ACTION LEVEL

At the action level, pie charts indicate the proportion of actions at three stages of development as of March 2016, October 2016 and April 2017.

OBJECTIVE LEVEL

At the objective level, bars show the percentage of progress achieved for each objective as of March 2016, October 2016 and April 2017. Progress is calculated from specific indicators displayed on the AMS. Progress since October 2016 is highlighted in green.

OVERALL PROGRESS

An Overall Progress assessment reflects on the ongoing work of each Implementation Roadmap. Champions highlight information they consider reflects advancements made in the past six months.

HIGHLIGHTS

The Highlights section lists examples of concrete achievements that can be attributed to each Implementation Roadmap, such as reports, events, publications, case studies and news.

All information within this report pertaining to the content of the Implementation Roadmaps has been drawn directly from the Action Monitoring System (AMS), available at ams.worldwaterforum7.org

As Champions are responsible for the management of the information on the AMS, the World Water Council, Ministry of Land, Infrastructure and Transport of the Republic of Korea, and Korea Water Forum have elected not to interpret or modify any content of the Implementation Roadmaps and are therefore dependent on the data made available through this public platform.

The information presented in this third edition of the Progress Report on Implementation Roadmaps was extracted on 9 February 2017. It is therefore important to recognize a potential gap between what appears in this report and the current state of progress.

Keep track of all Implementation Roadmaps in real time at:
